Application: Passenger car

RAVENOL HJC COLD CLIMATE -60°C is a ready to use, prediluted with water, ethylene-glycol based and time-tested coolant without amines and silicates. This product is formulated based on a proven inhibitor development as an extended life radiator antifreeze. The product is suitable for regions with cold climate.

The quality of an antifreeze is no longer just determined by the antifreeze effect (which automatically exists in an ethylene-glycol based product), but by the rust protection. That is why manufacturers subject antifreeze to lengthy corrosion and cavitation tests.

RAVENOL HJC COLD CLIMATE -60°C protects the cooling system from rust, frost, and in summer, from overheating.

Application instructions

RAVENOL HJC COLD CLIMATE -60°C is a prediluted coolant with frost and rust protection for year-rounduse in automotive engines for regions with cold climate.

Even in summer coolant must contain enough antifreeze to ensure good corrosion and overheating protection.

Instructions:

Add **RAVENOL HJC COLD CLIMATE -60°C** to radiator to fill line.

RAVENOL HJC COLD CLIMATE -60°C can also be used according the mixing table. Mix **RAVENOL HJC COLD CLIMATE -60°C** with distilled water (per mixing chart) and add. Allow engine and heater to warm up, add coolant to fill level.

Table of mixing ratios:

Antifreeze protection until	Parts Antifreeze	Parts Water
-25°C	50%	50%
-37°C	65%	35%

Characteristics

- Excellent for light metal engines
- Good reserve alkalinity
- High-quality corrosion additives for optimal corrosion protection

- Elastomer compatible with elastomers used in automotive radiators
